Setting up K3S Cluster using Raspberry Pi 3

Cat-Dog Detection

**Cloud Computing SoSe23
Prof. Dr. Christian Baun**

Setting up K3S Cluster

❑ Install k3s server

```
- curl -sL https://get.k3s.io | sh -  
sudo cat /var/lib/rancher/k3s/server/node-token
```

```
pi@kmaster:~$ sudo cat /var/lib/rancher/k3s/server/node-token  
K1012630f90eb7040690d92765c5a5a8af2a082ab2e2c5f09a0d5a3cd0131677822::server:clc7b474a2dea0a8eec0e188cf875769
```

❑ For Worker Node

```
- curl -sL https://get.k3s.io | K3S_URL=https://<kmaster_IP_from_above>:6443 K3S_TOKEN=<token_from_above> sh -
```

```
sudo kubectl get nodes
```

```
# or
```

```
sudo k3s kubectl get nodes
```

```
pi@kmaster:~$ sudo k3s kubectl get nodes  
NAME          STATUS    ROLES          AGE    VERSION  
knode2        Ready     <none>         18h    v1.27.3+k3s1  
knode1        Ready     <none>         18h    v1.27.3+k3s1  
knode3        Ready     <none>         17h    v1.27.3+k3s1  
kmaster       Ready     control-plane,master  19h    v1.27.3+k3s1
```

Cat-Dog Detection

Cloud Computing SoSe23
Prof. Dr. Christian Baun

Docker Setup

- ❑ Install Docker on Master Node and all three worker node using this

Comma

- sudo apt install docker
- sudo systemctl start docker
- sudo systemctl enable docker
- sudo systemctl status docker

- ❑ Set up k3s server in master node

- curl -sL https://get.k3s.io | sh -s --docker

- ❑ Install Docker on Worker Node and all three worker node using this Command

- curl -sL http://get.k3s.io | K3S_URL=http://:6443 K3S_TOKEN= sh -s -- docker

- ❑ For checking status of docker in master node

- sudo kubectl get nodes

```
pi@kmaster:~$ sudo kubectl get node -o wide
NAME      STATUS   ROLES    AGE   VERSION   INTERNAL-IP   EXTERNAL-IP   OS-IMAGE             KERNEL-VERSION   CONTAINER-RUNTIME
knode1    Ready    <none>   18h   v1.27.3+k3s1  192.168.0.101 <none>        Debian GNU/Linux 11 (bullseye) 6.1.21-v8+       docker://20.10.5+dfsg1
kmaster   Ready    control-plane,master  19h   v1.27.3+k3s1  192.168.0.233 <none>        Debian GNU/Linux 11 (bullseye) 6.1.21-v8+       docker://20.10.5+dfsg1
knode3    Ready    <none>   17h   v1.27.3+k3s1  192.168.0.56  <none>        Debian GNU/Linux 11 (bullseye) 6.1.21-v8+       docker://20.10.5+dfsg1
knode2    Ready    <none>   18h   v1.27.3+k3s1  192.168.0.67  <none>        Debian GNU/Linux 11 (bullseye) 6.1.21-v8+       docker://20.10.5+dfsg1
```

After Successful deployment status

Minio Deployment

```
pi@knode3:~$ sudo docker pull minio/minio
Using default tag: latest
latest: Pulling from minio/minio
Digest: sha256:cde7d0beaal50ec9f3323f9432c73794b43496176ae4d0bb4898625e0b7fe51b
Status: Image is up to date for minio/minio:latest
docker.io/minio/minio:latest
```

```
pi@kmaster:~$ sudo kubectl get pods -o wide
NAME READY STATUS RESTARTS AGE IP NODE NOMINATED NODE READINESS GATES
minio-deployment-7ddc7dffcd-8q4cc 1/1 Running 3 (11h ago) 19h 10.42.2.13 knode1 <none> <none>
```

```
pi@kmaster:~$ sudo kubectl get services -o wide
NAME TYPE CLUSTER-IP EXTERNAL-IP PORT(S) AGE SELECTOR
kubernetes ClusterIP 10.43.0.1 <none> 443/TCP 42h <none>
minio-service LoadBalancer 10.43.31.244 192.168.0.233,192.168.0.56,192.168.0.67 9000:32749/TCP,41117:30699/TCP 19h app=minio
```

Mqtt Deployment

```
pi@knode2:~$ sudo docker pull eclipse-mosquitto
Using default tag: latest
latest: Pulling from library/eclipse-mosquitto
Digest: sha256:efc3fd76a152985decdbd3768f79e4635d2e47febaeb1349d8f421a48fb0564b
Status: Image is up to date for eclipse-mosquitto:latest
docker.io/library/eclipse-mosquitto:latest
```

```
pi@kmaster:~/pestdetectionsystem/cluster_deployemt/mosquitto$ sh deploy.sh
deployment.apps/mqtt-deployment created
configmap/mqtt-configmap created
service/mqtt-service created
```

```
pi@kmaster:~/pestdetectionsystem/cluster_deployemt/mosquitto$ sudo kubectl get pods -o wide

minio-deployment-7ddc7dffcd-8q4cc 1/1 Running 4 (24h ago) 2d7h 10.42.2.15 knode1 <none> <none>
mqtt-deployment-658b7957bb-s84pp 1/1 Running 0 59s 10.42.2.16 knode1 <none> <none>
```

Cat-Dog Detection

Cloud Computing SoSe23
Prof. Dr. Christian Baun

Implementation

- ❑ Camera Module and Edge Node Set Up for Object Detection
 - Connect the Pi Camera Module v2
 - OpenCV and Python Packages Setup
- ❑ Cluster Configuration
 - Docker Container Setup for master node
 - Docker Container Setup for worker node
 - Kubectl Utility Configuration
 - Deploying of MinIO in Cluster
 - Minio over Kubernetes Service Configuration
 - Deploying of MinIO in Cluster
 - MinIO with persistent volumes Activation
 - Mqtt
 - Model Training
 - Edge Node for Dog Detection
 - Upload Frame to Minio
 - Web Application Development

Challenges and Improvements

- Edge Node Configuration
- Performance of YOLO V5 Model
- Infrastructure Configuration and Sharing
- Resource Constraints
- Limitations of MinIO in Multi-Node Multi-Drive Mode
- DHCP Server Configuration
